

## LAMBORGHINI SESTO ELEMENTO

### PERFORMANCE

The **Sesto Elemento** is equipped with a 6-speed semi-automatic transmission with paddle shift and all wheel drive system, mated to a 5.2 liter V10 engine borrowed from the Gallardo, generating 578 PS (425 kW; 570 hp) and 540 N·m (400 lbf·ft) of torque. The chassis, body, drive shaft and suspension components are made of carbon fiber, reducing the overall weight to a mere 999 kilograms (2,200 lb), a weight comparable to subcompact cars such as a Honda Fit.

It is the lightest car **Lamborghini** has ever produced. Air is released through 10 distinctive hexagonal holes in the engine cover, while two intakes funnel cool air into the mid-mounted engine compartment. The Sesto Elemento's high amount of horsepower combined with low overall weight translate to a power-to-weight ratio of 0.57 hp/kg 0.26 hp/lb) (with a weight-to-power ratio of 1.75 kg/hp and 3.85 lb/hp). Lamborghini claims a 0–100 km/h (0–62 mph) acceleration time of just 2.5 seconds.
